It is an alteration of the specificity of restriction enzyme mediated cleavage of DNA that can occur under some non standard conditions that differ from the optimum for the enzyme. This alteration leads to the cleavage at non specific sites. Nonstandard conditions include: 1. High pH (>8.0). 2.

Restriction Enzyme Cleavage of DNA - Página Principal

A restriction enzyme or restriction endonuclease is an enzyme that cleaves DNA into fragments at or near specific recognition sites within the molecule known as restriction sites.

Restriction enzyme - Wikipedia

Restriction Enzyme Analysis. Restriction enzymes are enzymes that bind to specific recognition sequences to cleave double-stranded DNA (38). Mutations creating or abolishing such recognition sites can, therefore, be

investigated by employment of restriction enzymes.
